

CentiMark Roof Top Snow Removal

When too much snow accumulates on a roof, there's a serious concern for roof collapse due to the weight load of the snow.

***What should you do?
Call CentiMark!***

Do not attempt to remove the snow or hire a landscaper/snow removal contractor who is not familiar with roofing.

The CentiMark Snow Removal Advantages:

- ❄ Safe removal of snow from the roof while utilizing the proper equipment
- ❄ Removal of the snow without damaging the existing roof system
- ❄ A roofing contractor that is experienced with roof repairs should they be needed
- ❄ Special attention is observed in areas of drifted snow areas (rooftop equipment, parapet and firewalls, penthouses and elevation changes)
- ❄ Understanding of weight load codes and interior structures - such as drop ceiling tiles and computer cables that could be affected

CentiMark Offers Snow and Ice Solutions:

Snow guards hold onto snow at the edge or peak of a roof and let snow melt gradually underneath. This prevents a massive amount of snow from sliding off the roof and causing an unsafe and dangerous workplace. **Heat tape** can be installed on downspouts to help control ice build-up at the edge of a roof.

CENTI^{MARK}
THE **MARK** OF EXCELLENCE IN ROOF SYSTEMS
